

Crop advisories for Rabi season crops.

Early sowing of wheat in nematode infested fields minimizes the crop loss.

- Avoid growing susceptible wheat and barley varieties in infested fields where ever possible, and grow non host crops like mustard, gram, methi etc.
- Grow resistant varieties of wheat (Raj MR 1) and barley (BH 75 and BH 393).
- Use Azotika HT 54 @ 200ml/40 kg seed as seed treatment.
- Apply carbofuran 3G (Furadan) @ 13 kg/acre at sowing time.
